

Vertical Stack Rail – VSRA

PLYMOVENT[®]
INTELLIGENT PROCESS VENTILATION™

The vertical stack rail requires no operator intervention.

The VSRA is the solution to vehicles that have top exhaust and have to move through a service bay.

We recommend the VSRA for light or heavy commercial vehicles and emergency response vehicles with top exhaust stacks such as airport crash rescue vehicles, heavy rescue and transit bus operation. The VSRA can be set up for back-in or drive-through configurations. It will also handle multiple vehicles in tandem and can be retrofitted into any length of building.

Features and Benefits

- Floating suspension
- Air volumes as high as 2380 m³/h/ 1400 CFM
- Compact clearance to vehicle
- Adjustable height stack capture
- Fits any vehicle stack
- Operator free operation
- One-piece aluminium rail
